* Price does not include ICPR Feedback

Speak with your AED Area Manager today to discuss how to utilize Cardiac Science Capital to fund your ideal AED program and help save more lives.

Powerheart G5 AED + 4 year RRS Advanced

\$88.50/month

Site Assessment & Rescue Support

RRS assesses your location to determine the optimal number of AEDs and then recommends the best placement for easy accessibility. Should an AED be deployed during an event, a Cardiac Science technician will visit the site within 48 hours to download the event details, replace device components, and reset the AED.

Service & Maintenance

With RRS, we will service and maintain your AEDs through Cardiac Science technicians who have comprehensive background checks—no third-party contractors here. We conduct annual visits to your site to ensure your devices are in good working order and replace expired pads, batteries, and other components.

Medical Direction & Oversight

RRS provides your organization with medical direction and oversight. We will also help ensure that your program is compliant with federal, state, and local laws. Your AED program will be backed by a comprehensive indemnification policy*, providing peace of mind.

Online Training & Tools

RRS provides you with online tools to manage your AED program, including our newly redesigned MasterTrak™ software that tracks your AEDs and their locations, an online training platform, CardiAcademy (our non-certified refresher course), to train your organization, and a Customer Toolbox that provides useful templates to facilitate communications about your AED program.

Note: You may add additional training, services, or accessories to your Cardiac Science AED package for a small increase in monthly payments.

** Indemnification policy refers to Cardiac Science AEDs only. See Cardiac Science indemnification policy at www.cardiacscience.com for details.*
